^a The average size of the cores in the analysis is 1,169 acres; therefore, cores greater than 1,200 acres were considered to be large cores and cores less than 1,200 acres were considered to be small.

^b Interior forest cutting.

^c Buffer zone areas of remaining forest immediately adjacent to one or both sides of the new corridor that would no longer be classified as interior forest due to the new, project-related disturbances
